PRECISION ENGINEERING FOR MODERN FINANCE

INVITATIONS

It starts with an invite

An admin invites a member with a **tokenized link**. The public Accept-Invite page validates the invite, **locks the email to the invited address** so the account can only be claimed by the intended person, and on accept either auto-logs the member in or routes them to login.

Tokenized link

The admin sends a unique, token-bearing invitation link to the prospective member.

Validated & locked

The public page validates the token and pins the email field to the invited address — it cannot be changed.

Accept & enter

On accept, the member is auto-logged-in or sent to login, ready to start onboarding.

THE WIZARD

A guided onboarding wizard

Member setup is a guided multi-step wizard. **Progress is saved**, so onboarding resumes exactly where it left off if the member steps away. The steps run in this order:

STEP	STAGE	WHAT IT CAPTURES
1	Your profile	Profile photo, CNIC, and address.
2	Work & income	Employment and income details.
3	Signature	Capture a signature — draw it or upload an image.
4	Documents Required	Upload both sides of the CNIC — front <i>and</i> back. Required to proceed.
5	Nominee Optional	Nominee name, CNIC, and relationship, plus optional nominee CNIC front & back images.
6	Security PIN	Set a 4-digit transaction PIN.

Resume anywhere

Because progress is persisted, a member who closes the app mid-wizard returns to the same step — no re-entering completed sections.

DOCUMENT VAULT

The KYC document vault

Each member carries a `documents` array. Every document has a **type** and a **status**; images are stored on **Cloudinary**, expiry is tracked with reminder jobs, and staff verify or reject items in a verification queue.

Document types

CNIC

Selfie

Utility Bill

Tax Return

Proof of Residence

Other

Verification statuses

Pending

Verified

Rejected

Expired

STAGE	WHAT HAPPENS
Upload	The member uploads a document of a known type; the image is stored on Cloudinary.
Pending	The document enters the verification queue awaiting staff review.
Verified / Rejected	Staff verify a valid document or reject one that fails review.
Expired	Expiry is tracked; reminder jobs flag documents before they lapse.

CNIC HANDLING

Identity documents, handled right

CNIC front and back images are **compressed client-side**, then uploaded to **Cloudinary** — only the secure URL is stored, never base64. The CNIC number itself is **encrypted at rest** with a per-tenant uniqueness hash.

Compress on device

Front and back images are compressed in the client before upload to keep storage and bandwidth lean.

Store the URL only

Images go to Cloudinary; the record keeps the secure URL — never a base64 blob.

Encrypt the number

The CNIC number is encrypted at rest, with a hash that enforces per-tenant uniqueness while keeping it searchable.

Privacy by default

Sensitive identity data is never held in plaintext at rest, and raw image bytes never live in the database — only references and encrypted values do.

CUSTOMER MIRROR

One canonical KYC entity

Each Member is linked to a **Customer** — the canonical KYC entity that admins read. Identity fields, signature, and CNIC / nominee images are **mirrored** from the Member to the Customer, so the business side always sees a single, consistent record.

MIRRORED TO THE CUSTOMER	DETAIL
Identity fields	Core profile and identity data from the member's onboarding.
Signature	The captured (drawn or uploaded) signature.
CNIC images	The member's CNIC front and back images.
Nominee images	The optional nominee CNIC front and back images.

APPROVAL

From applicant to active member

Members carry an `approvalStatus` that moves from **pending** to **approved**. The platform's password policy applies at sign-up, so every member account starts with a strong credential.

Approval status

A member is `pending` until reviewed and `approved` once the business confirms them.

Strong password at sign-up

The standard policy — **8 chars · upper · number · special** — is enforced when the member sets their password.

DOCUMENT STATUSES

In one sentence

A member accepts a locked invite, completes a resumable six-step wizard with required CNIC capture, lands in a document vault that staff verify, and graduates from pending to approved — with identity mirrored to the canonical Customer record throughout.
